

## ADM'S C4I FEATURE

The ADF is committed to becoming fully networked across the land, air and maritime environments. The single service approach to intelligence gathering/dissemination and situational awareness is long gone with many projects in this space taking a truly joint approach under the Joint Capability Group office. *ADM* aims to cover key programs and projects in this space including Surveillance, Command and Control (C2) and Communications programs.

### SPACE

With *ADM*'s Space Summit to be held in Canberra on December 2, we're taking the opportunity to look at how defence and civilian programs are working together to form a sovereign capability in this domain.

### BUDGET 2020

With the federal Budget moved to October 6 this year, our annual Budget coverage will examine what the key documents holds for the Defence community. With expert analysis from both *ADM*'s Managing Editor Katherine Ziesing and Australian Strategic Policy Institute (ASPI) Marcus Hellyer, this is a key series to explain the story behind the numbers.
